

+US INTEROPERABILITY

Interoperability within the Healthcare sector is key to ensuring innovation is applied as technology continues to advance.

Over recent months, +Us have worked hard to ensure our overall service offering fits with the forward direction of the NHS, both in terms of technological advancement, and most importantly the “interoperability agenda” which enables workforce platforms to join seamlessly together.

+Us can now offer NHS Organisations the opportunity to utilise our Contingent Workforce Platform, with seamless integration to either Patchwork, Locums Nest and Allocate Bank Staff.

Rather than allowing the two systems to connect directly to one another, +Us have built an integration layer that sits between the systems to manage the dataflow. This provides a scalable and resilient solution that ensures optimum performance and protects against a loss of data should either of the systems experience an outage.

INTEGRATION BENEFITS

- Ability to utilise best in class technology, to support your bank & agency workers
- Simple cascade of open Bank shifts to agency supply chain
- Full two-way integration, eliminating the need for manual entry across technology platforms
- Enabling the achievement of both operational and financial efficiencies
- Improve workforce planning, with real-time insights
- Flexibility to determine most appropriate bank supplier for your NHS organisation, who can work alongside our Contingent Workforce Platform for agency workers
- Aligned working relationship with other suppliers to ensure Trust can utilise joint expertise within respective companies
